

3DEXPERIENCE FastTrack

Let us bring your CAD data seamlessly on cloud

The 3DEXPERIENCE FastTrack service by PLM Group guarantees you a smooth moving into a secure cloud data management and collaboration solution. This service helps companies to get quickly started with a data management and collaboration solution that is ready to use, and they can start using it on the cloud effectively from the first day.

The duration of the FastTrack service provided by PLM Group is approximately two weeks and it includes also online learning and self-study. Shortly, the service consists of a start-up meeting, online e-Learning program, learning sessions, and final check-up that your team is onboarded. Extra customizations are determined before, during or after the service. Also, free support on the 3DEXPERIENCE platform for one year is included in the service fee.

The service is implemented in three steps – 1) Prepare, 2) Learn and Adopt, and 3) Execute and Evolve.

Step 1: Prepare

To get started, we book some meetings in your calendar. We plan the project from the beginning to go-live date and book some status meetings in between. We assist you with the system configuration, getting the login credentials to everybody in your company, and setting up your **3DEXPERIENCE** Customer Tenant – in other words, we make everything ready for you just to be able to click and access the platform and start using it. We also introduce the IFWE Community which you can use to engage and interact with PLM Group and Dassault Systèmes.

Step 2: Learn and Adopt

This is the step where you do the studying. We provide e-Learning courses for the **3DEXPERIENCE** FastTrack roles on the 3DS Learning Space. Through these courses, you get an idea of the basics of **3DEXPERIENCE**; the methodology, the user interface and functionalities.

At the end of each e-Learning section there is a Follow-up session via Microsoft Teams. These are held by PLM Group technical experts and the aim is to discuss the ongoing e-Learning section.

The e-Learning courses for following roles are available at the 3DS Learning Space:

- Collaborative Business Innovator
- Collaborative Industry Innovator
- Collaborative Designer for SOLIDWORKS

Step 3: Execute and Evolve

The Execute and Evolve step is divided into sprints. They are based on **3DEXPERIENCE** roles and data management functionalities.

The predefined **3DEXPERIENCE** setup and methodology are shown and explained. All engagement is conducted in your **3DEXPERIENCE** Customer Tenant. The sprint sessions are also performed online through Microsoft Teams.

In this step, the topics cover for example:

- How to map properties from SOLIDWORKS into attributes on the platform
- Automatic item name and number generation
- Searching your data
- Exploring products
- Creating and managing tasks
- How to manage access rights
- How to setup a community
- How to install and work with the SOLIDWORKS Connector

Want to hear more?

The **3DEXPERIENCE** FastTrack service is offered for SOLIDWORKS users with a competitive price and it takes about two weeks. If you need any further assistance, we can help you on an hourly rate or propose an offer regarding your needs. Contact us for further information and pricing at plmgroup.eu.

About 3DEXPERIENCE platform

The **3DEXPERIENCE** platform is a cloud-based ecosystem of connected key applications from Dassault Systèmes software brands. It is a unified, easy-to-use PLM solution for all companies with various business applications including SOLIDWORKS.

The **3DEXPERIENCE** platform is a game changer for manufacturing industry. Platform provides a real-time view of business activity and ecosystem, connecting people, ideas, and data in a single collaborative environment that empowers businesses and people to work and innovate in entirely new ways.

About PLM Group

PLM Group creates digital business solutions in cooperation with the innovative customers. We are the largest reseller of Dassault Systèmes SOLIDWORKS and **3DEXPERIENCE** solutions in the Northern Europe. In addition to software and services, our product portfolio contains market-leading 3D printers. We are a part of Swedish LMT Group, and we serve our customers in nine languages in seven countries.
